n/N
% (95% CI)
Primary analysis
Uncomplicated course, first echo 1–30 d
26/1,618 1.61 (1.10–2.34)
Cohort, timing and treatment
Last in-hospital report Z < 2
26/1,678 1.55 (1.06–2.26)
First echo within 60 d
27/1,739 1.55 (1.07–2.25)
IVIG-treated children only
25/1,511 1.65 (1.12–2.43)
Readmissions within 30 d excluded
19/1,534 1.24 (0.79–1.93)
First echo on illness day 11–21
19/921 2.06 (1.32–3.20)
Calendar period and data source
Index admissions 2018–2020
13/709 1.83 (1.07–3.11)
Index admissions 2022–2024
13/909 1.43 (0.84–2.43)
2021, rule-based baseline
7/515 1.36 (0.66–2.78)
2018–2024 including 2021
33/2,133 1.55 (1.10–2.16)
Events from exact numbers only
24/1,618 1.48 (1.00–2.20)
All data, 2018–2026
32/2,293 1.40 (0.99–1.96)
Children without a post-discharge echo
Inverse probability weighting
— 1.54 (0.98–2.21)
Standardized to all children
— 1.55 (1.00–2.19)
None of them with an aneurysm
26/2,839 0.92 (0.63–1.34)
Stricter event definitions
Z ≥ 2.5 again within 90 d
13/1,618 0.80 (0.47–1.37)
Confirmed or not reimaged ≤90 d
17/1,618 1.05 (0.66–1.68)
Exact maximal Z ≥ 3.0
18/1,618 1.11 (0.70–1.75)
Exact in-hospital maximum (n = 276)
Z ≥ 2.5, primary definition
8/276 2.90 (1.48–5.61)
Rise ≥ repeatability coefficient, SD
1/276 0.36 (0.06–2.02)
Rise ≥ repeatability coefficient, robust
8/276 2.90 (1.48–5.61)
Temporal validation
Primary analysis
6/615 0.98 (0.45–2.11)
Without the conclusion rule
5/615 0.81 (0.35–1.89)
Derivation-era categories
6/606 0.99 (0.45–2.14)
Z ≥ 2.5 again within 90 d
6/615 0.98 (0.45–2.11)
